Exp 4 Setup and Configure a LAN using a switch
10/8/26 and ethernet cables in your lab

Aim:

To setup and configure a LAN using switch and ethernet cables.

WHAT IS LAN?

⇒ LAN stands for Local Area Network which is a group of computers and connected device linked through in a small physical location like a school, home or office building.

HOW TO SET UP LAN?

STEP 1: CONNECT THE HARDWARE

* Place the router in the central location near a power outlet.
* Connect your modem to the router's WAN or internet port using a ethernet

STEP 2: CONNECT YOUR DEVICES

* Wired setup: Ply one end of ethernet cable into your computer and the numbered LAN ports on the router.

STEP 3: CONFIGURE THE ROUTER

* Type your IP address 192.168.1.10 into the address bar and press Enter
* Log In using the default username and password on the router.

STEP 4: CHECK THE CONNECTIVITY

=) check the connectivity b/w switch and other machine by using PING Command in the cmd of the device

STEP 5: CONFIRM THE CONNECTIVITY

Try to access the shared folder from other completed of there network.

Result:

Wireless LAN using switch and ethernet Cables are executed successfully in CISCO PACKET TRACER.
